Nerve conduction studies and electromyography (EMG)

A nerve conduction study is a test to check how your nerves are working. It involves pads/ rings being placed on your skin which cause a tingling/tapping and then recording how your nerves respond. After the nerve conduction study you may also need an electromyography (EMG) test, but it is not always necessary. What is an electromyography (EMG)?

The physiological background of EMG

- Quick, easy to apply - No medical supervision, required certification - Minimal discomfort - Easy to reposition • Disadvantages - Generally used only for superficial muscles - Cross-talk concerns - No standard electrode placement - May affect movement patterns of subject Physiology of ...
